---

**Abstract.** *Ornithonyssus bursa* (Berlese, 1888), known as the tropical fowl mite, is a hemaphagous mite of domestic and wild birds. This mite can bite humans accidentally, causing “gamasoidosis,” “avian-mite dermatitis,” or “bird-mite dermatitis” in tropical and subtropical regions of the world. In Brazil, *O. bursa* was previously recorded parasitizing birds of the orders Charadriiformes Huxley, 1867, Columbiformes Latham, 1790, Galliformes Temminck, 1820, Passeriformes Linnaeus, 1758, Strigiformes Wagler, 1830, and Tinamiformes Huxley, 1872. Here, we provide a new association of *O. bursa* with Harris’s hawk, *Parabuteo unicinctus* (Temminck, 1824) (Accipitriformes: Accipitridae) and the first record of this mite species in the Paraíba State, Brazil.

**Keywords:** Macronyssid, ectoparasites, Brazilian Northeast, Birds of prey.

Macronyssidae comprise approximately 240 species, organized in 34 genera. The mites included in this family are ectoparasites of reptiles, birds, and mammals (Radosky 2010). One of these species, *Ornithonyssus bursa* (Berlese, 1888), known as “tropical fowl mite”, is a hemaphagous mite of domestic and wild birds, and can bite humans accidentally, causing “gamasoidosis”, “avian-mite dermatitis”, or “bird-mite dermatitis” in tropical and subtropical regions of the world (Bassini-Silva et al. 2019; Lima-Barbero et al. 2019).

In Brazil, *O. bursa* is found parasitizing birds of the orders Charadriiformes Huxley, 1867, Columbiformes Latham, 1790, Galliformes Temminck, 1820, Passeriformes Linnaeus, 1758, Strigiformes Wagler, 1830, and Tinamiformes Huxley, 1872 (Vaz 1935; Reis 1939; Ribeiro et al. 1992; Mascarenhas et al. 2009; Goulart et al. 2011; Moraes et al. 2011; Coimbra et al. 2012; Oliveira et al. 2012; Wambier & Wambier 2012; Mentz et al. 2015; Silva et al. 2018; Bassini-Silva et al. 2019; Mesquita-Sousa et al. 2020). To plot the distribution map of *O. bursa* in Brazil, we used the occurrence locations provided in the previous records, including the new record of this study (Tab. 1, Fig. 1). To search for geographic coordinates not provided in the original records, we use the “GeoLoc” online tool, from the speciesLink project, for the georeferencing of zoological collections (CRIA 2021).

Here, we are providing a new association of *O. bursa* with Harris’s hawk, *Parabuteo unicinctus* (Temminck, 1824) (Accipitriformes: Accipitridae) in Paraíba State, Brazil. The material was collected on September 18th, 2020, from a captive adult female Harris’s Hawk (Fig. 2). The animal is legally kept and used by a professional falconer to control pigeons in the João Pessoa Municipality, Paraíba State. During a demonstration of falconry techniques held at the Arruda Câmara Zoo-Botanical Park, João Pessoa, Paraíba State, an ectoparasite was noticed walking on the animal’s legs. Because of this, in this short communication we prefer to use the term “mite/bird of prey association”. The ectoparasite was collected with a piece of tape and placed in a tube containing 70° alcohol. This material was slide-mounted with Hoyer’s medium according to Barros-Battesti et al. (2021) and deposited in the Acalorological Collection of Butantan Institute (IBSP) under the access number IBSP 16533. The specimen was imaged using a Leica DFC 500 digital camera coupled to an optical microscope Leica DM4000B, in the Zoological Collection Laboratory, Butantan Institute, São Paulo. All images were prepared with Adobe Photoshop v. 13.0. According to Bassini-Silva et al. (2019), we confirm the main set of morphological characters, and the details of the sternal and distal opisthosoma shields are shown in (Fig. 3).

The Harris’s Hawk is widely distributed in the America’s and can be found in the open lands of the southwestern region of the United States of America to the south of Argentina (Patagonia region) (Brown & Amadon 1968; Bednarz 1995; Couve & Vidal 2003). This hawk preys mainly on small birds and mammals, such as wild and synanthropic doves, passerines, quails, small herons, rodents, and marsupials (Whaley 1986; Jiménez & Jaksic 1993; Bednarz 1995).

In Brazil, the only record of *O. bursa* parasitizing birds of prey was made by Mascarenhas et al. (2009), who found a lot of this mite on the offspring of *Megascolex chiloiba* (Vieillot, 1817) (Strigiformes: Strigidae), in Pelotas Municipality, Rio Grande do Sul State. This is the first report of *O. bursa* on *P. unicinctus*. The presence of this association can be important for the bird’s health since the presence of this mite can cause lesions with intense pruritus, or even host mortality when population numbers are large (Coimbra et al. 2012; Mascarenhas et al. 2009).

Although this bird of prey species is considered as Least Concern (LC) on the Red List (IUCN 2021), and not threatened with extinction, its population has been declining in recent years. In addition, this kind of mite/bird of prey association may be related to this bird feeding...

hhabits, which include the birds listed in Tab. 1. The hawk from this report was specifically used to control Columba livia Gmelin, 1789 (Columbiformes: Columbidae), populations, which are common hosts of O. bursa. This may contribute to the maintenance of these mites on other hosts, and help in dispersing these mites throughout the America’s, contributing to the increase in human bite cases.

Acknowledgements

To Gabrielle Ribeiro de Andrade and Maria Cristina Ferreira do Rosário for technical contribution. This work was supported by the Fundação de Amparo à Pesquisa do Estado de São Paulo under the Grant FAPESP no. 2021/02295-4 (JCT), 2021/08179-6 (APM), 2019/19853-0 (FCJ), 2017/01416-7, 2018/24667-8 and 2020/11755-6 (RB-S). This study was financed in part by the Coordenação de Aperfeiçoamento de Pessoal de Nível Superior - Brasil (CAPES) - Finance Code 001.

Authors’ Contributions

JSP, ALV, and GFD collected the mite in association with the host and performed the record. FCI, RB-S, and APGD performed the study and confirmed the identification of the mites. RS-R, JCT, and APM conducted the mite’s preparations and wrote the manuscript with input from all authors.
